myelin PO protein - bovine
C;Species: Bos primigenius taurus (cattle)
C;Accession: A29128
R;Sakamoto, Y; Kitamura, K.; Yoshimura, K.; Nishijima, T.; Uyemura, K.
R;Sakamoto, Y.; Kitamura, K.; Yoshimura, K.; Nishijima, T.; Uyemura, K.
A;Title: Complete amino acid sequence of PO protein in bovine peripheral nerve myelin.
A;Title: Complete amino acid sequence of PO protein in bovine peripheral nerve myelin.
A;Title: Complete amino acid sequence of PO protein in bovine peripheral nerve myelin.
A;Mccession: A29128
A;Molecule type: protein
A;Mccession: A29128
A;Mccession: A29128
A;Molecule type: protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

Human and mouse cDNA sequences.", Jone than 15,000 full-length

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

- FUNCTION: SERVES AS A RECEPTOR FOR GROUP B COXSACKIEVIRUSES AND

SUBGRROUP C OF ADENOVIRUSES (ADZ AND ADS).

- SUBICRELUTAR LOCATION: Type I membrane protein.

- SIMILARITY: Contains 2 immunoglobulin-like C2-type domains.

Saavedra R.A., Fors L., Aebersold R.H., Arden B., Horvath S.,
Sanders J., Hood L.;
The myelin proteins of the shark brain are similar to the myelin
proteins of the mammalian peripheral nervous system.";
J. Mol. Bvol. 29:149-156(1989).
I. FUNCTION: Creation of an extracellular membrane face which guide
the wrapping process and ultimately compacts adjacent lamellae.
SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Found only in peripheral nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Chondrichthyes, Elasmobranchii, Galeomorphii, Heterodontoidea, Heterodontiformes, Heterodontidae, Heterodontus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               evidence for early expression in avians.";
J. Neurosci. Res. 25:143-151(1990).
-!- FUNCTION: Creation of an extracellular membrane face which guides the wrapping process and ultimately compacts adjacent lamellae.
-!- SUBCELLUTAR LOCATION: Type I membrane protein.
-!- TISSUE SPECIFICITY: Found only in peripheral nervous system
                                                                                                                                                                                                                                                                    01-OCT-1994 (Rel. 30, Created)

IPrimary structure and functional expression of a beta 2 subunit of human infant brain sodium channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           human and mouse CDNA Sequences.;

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002)

-!- FUNCTION: Crucial in the assembly, expression, and functional modulation of the heterotrimeric complex of the sodium channel. The beta-2 subunit causes an increase in the plasma membrane surface area and in its folding into microvilli (By similarity).
-!- SUBUNIT: THE SODIUM CHANNEL CONSISTS OF A PORE-FORMING ALPHA SUBUNIT: BETA-1 AND BETA-2 SUBUNITS. BETA-1 IS NONCOVALENTLY ASSOCIATED WITH ALPHA, WHILE BETA-2 IS COVALENTLY LINKED BY DISULFIDE BONDS (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: Type I membrane protein.
                                                                                   Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

Epitbelial V-like antigen (EVA), a novel member of the immunoglobulin
superfamily, expressed in embryonic epithelia with a potential role as
homotypic adhesion molecule in thymus histogenesis.",
Cell Biol. 141:1061-1071(1998).
-!- FUNCTION: Mediates homophilic cell-cell adhesion.
-!- FUNCTION: Mediates homophilic cell-cell adhesion.
-!- SUBCELDUAR LOCATION: Type I membrane protein (Probable).
-!- TSUS ESCIFICITY: Expressed in liver and gut, skin, and testis
but not in thymocytes, lymphocytes, macrophage or dendritic cells
or cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SMARY; SN00406; IGv; 1.

-!- FUNCTION: MEDIATES SELECTIVE NEURONAL GROWTH AND AXON TARGETING.
CONTRIBUTES TO THE GUIDANCE OF DEVELOPING AXONS AND REMODELING OF
MATURE CIRCLITS IN THE LIMBIC SYSTEM. ESSENTIAL FOR NORMAL GROWTH
OF THE HYPPOCAMPAL MOSSY FIBER PROJECTION (BY SIMILARITY).
-!- SUBSCELLUITS LOCATION: Attached to the membrane by a GPI-anchor.
-!- TISSUE SPECIFICITY: Expressed on limbic neurons and fiber tracts
as well as in single layers of the superior colliculus, spinal
chord and cerebellum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FROUED IN MATURE FORM (POTENTIAL).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             οĘ
                                                                                                                                                                                                                                                                                                                                                                                                                                        "Identification and characterization of two members of a novel class of the interleukin-1 receptor (IL-IR) family. Delineation of a new class of IL-IR-related proteins based on signaling."; J. Biol. Chem. 275:29946-29954 (2000).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isold-Q9ERS6-2; Sequence=VSP 008056, VSP 008057;
Note=may be due to an intron_retention;
ISSUE SPECIFICITY: Detected in fetal brain after day 12.5, in particular in parts of the diencephalon and in the basal plate of the spinal cord. In postnatal brain detected in cerebral cortex, olfactory bulb, in the CA1 region of the hippocampus and in Purkinje calls of the Xth cerebellar lobule.

SIMILARITY: Belongs to the interleukin-1 receptor family.
SIMILARITY: Contains 1 immunoglobulin-like C2-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              central

-!- PTM: N-GLYCAN IS SULFATED.
-!- SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
-!- SIMILARITY: Belongs to the myelin P0 protein family.

-!- FUNCTION: Creation of an extracellular membrane face which guides the wrapping process and ultimatelly compacts adjacent lamellae.
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- SUBCELLULAR FOUND only in peripheral nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Rattus norvegicus (Rat).

Schwann cells.
-!- PTM: N-LINKED GLYCAN IS SULFATED.
-!- SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
-!- SIMILARITY: Belongs to the myelin P0 protein family.
-!- SIMILARITY: Belongs to the myelin point.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PIR; JQ0622; MPRO.

Two novel members of the interleukin-1 receptor gene family, one deleted in Xp21.3-Xp21.3 mental retardation.";

Eur. J. Hum. Genet. 8:87-94(2000).

-!- SUBCELULIAR LOCATION: Type I membrane protein.

-!- SUBCELULIAR LOCATION: Type I membrane protein.

-!- TISSUE SPECIFICITY: Detected at low levels in fetal and adult cerebellum. Detected at very low levels in skin, liver, fetal overy and in placenta.

-!- SIMILARITY: Belongs to the interleukin-1 receptor family.

-!- SIMILARITY: Contains 3 immunoglobulin-like C2-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            class
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ferrante M.I., Ghiani M., Bulfone A., Franco B.;
"ILIRAPL2 maps to Xq22 and is specifically expressed in the central
nervous System.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              "Identification and characterization of two members of a novel clast of the interleukin-1 receptors (IL-IR) family. Delineation of a new class of IL-IR-related proteins based on signaling.";
